-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 20 February 2009.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 2/20/09 has been entered.

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 20, 21, 23-30, 32, 38-41, 43, 52, 54-81, and 83-87 are rejected under 35 U.S.C. 103(a) as being unpatentable over Szafranski et al. (US 5,338,051 A) and in further view of Bronson (US 5,785,342 A).

With respect to claims 20, 21, 23-30, 32, 38-40, 43-52, 54-66, 67-81, and 84-87, Szafranski et al. discloses a plastic binding that is welded to the top surface of a ski not using screws and including a U or T shaped cross-section and undercut and a having front, rear, and middle portions, wherein said middle portion is narrower than the outer portions and said front and rear portions are able to move longitudinally, and all portions

are of the same material which inherently gives them the same properties such as thermal expansion, flexural strength, torsional rigidity, and tensile strength, as shown in figures 1-10. Szafranski et al. does not disclose lugs or apertures in the ski. Bronson does disclose a ski 15 with binding plate 21 and longitudinal spaced, stud-like lugs 110 for engaging detent apertures 12, as shown in figure 2. It would have been obvious to one having ordinary skill in the art at the time of the invention to have provided the ski binding of Szafranski with the lugs and apertures of Bronson in order to position the plate on the ski before adhesion.

With respect to claim 58, the thickness of the adhesive layer or weld is not viewed as patentable unless it produces an unexpected result and therefore it would have been obvious to one having ordinary skill in the art at the time of the invention to have made the adhesive layer, of Szafranski as modified Bronson, 5-10% the thickness of the plate in order to provide a strong bond with the ski.

With respect to claims 41 and 42, the method of welding has been given little patentable weight and is not considered patentable unless it produces an unexpected result.

Response to Arguments

3. Applicant's arguments with respect to claims 20, 43, and 58 have been considered but are moot in view of the new ground(s) of rejection. Bronson has been applied as an example of lugs and apertures which are considered well-known in the art

of bindings. The specific thickness of the adhesive is not viewed as producing an unexpected result.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jeffrey J. Restifo whose telephone number is (571) 272-6697. The examiner can normally be reached on M-F 10-7.
